Subject: RE: Coming soon to a venue near you?

Hi Beverly-- I read over the policy you gave me at the MAFPE meeting. I think it has great potential, but for water issues will clearly need to be carefully linked with similar efforts on private lands. For example, the water quality of the Delaware Water Gap National Recreational Area is totally dependent on the behavior of towns, farms, industry and private homes upstream. The Fed actually controls very little of the watershed. However, the Fed has several pieces of a monitoring concept in place that, if integrated, would allow us to track the sources of ecosystem stress in Federal lands be they internal or external in origin, and thus set us up for negotiations over specific remediation actions that will improve ecosystem sustainability on federal holdings. The science necessary for this policy to work will require a consistent framework for integration among multiple programs. That's where we could probably help in a significant way, by building the integrated science concept that will be the foundation of the policy you've written. Without that rigorous scientific framework and links to the non-fed watersheds, this policy will be hard to sustain. Thanks for the copy. I hope there are ways we can help with the information side as this policy develops.
Regards- Pete Murdoch

Please respond to cwap

I hope everyone has now received the draft Unified Federal Policy, and is distributing the information to colleagues at all levels of Fed, state, Tribal, local governments. Hope you are all planning to attend at least one of the listening sessions!
